# South & SE Sides- Health Impacts

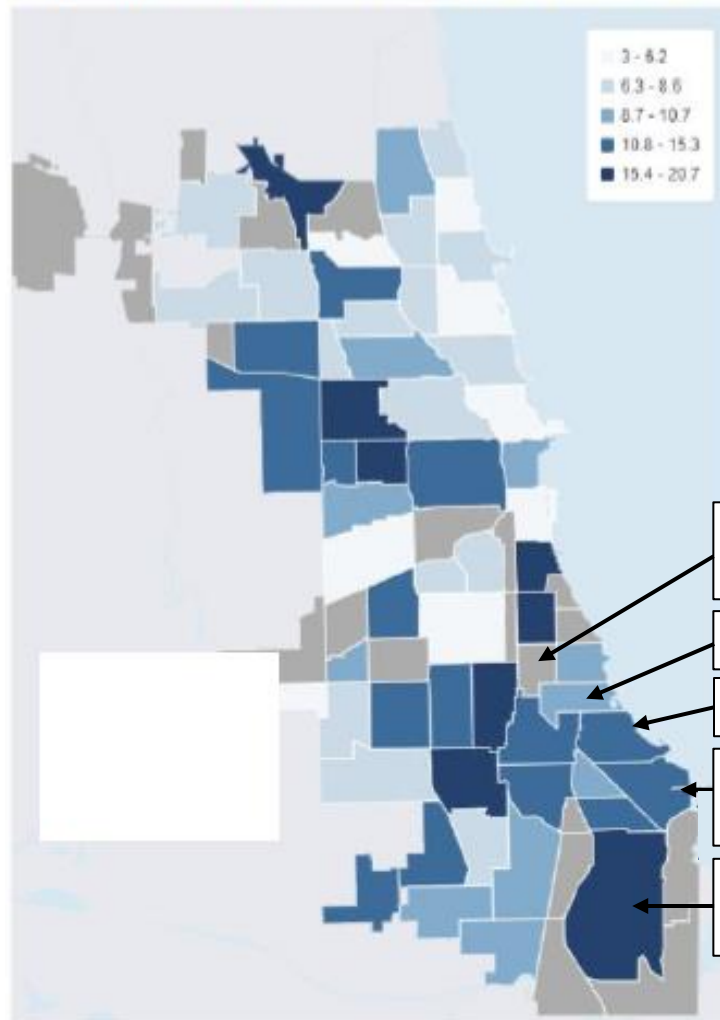

## Health and Covid-19

- ***Covid-19*** disproportionately affects people with pre-existing conditions (like asthma, cancer, heart disease), most living in majority African American and Latinx communities.
- Many families in our communities on Chicago's south and southeast sides have pre-existing health conditions.
- Many households are multi-generational, which means a household is likely to have at least one person who is high-risk.

## THE RACIAL AND ETHNIC COMPOSITION OF CHICAGOLAND, 2010

Hendricks, Kasey; Amanda E Lewis, Ivan Arenas, & Deana G. Lewis, "A Tale of Three Cities: The State of Racial Justice in Chicago Report." University of Illinois: Institute for Research on Race and Public Policy. (May 19, 2017) , p. 23

# South & SE Sides- Health Impacts

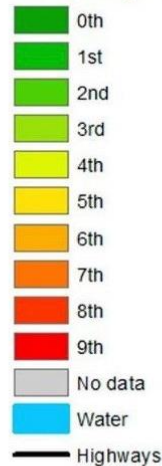

## Health and Covid-19

- ***Covid-19*** disproportionately affects people with respiratory issues, which are related to air quality.
- Again, African American & Latinx communities are most impacted.
- South and southeast sides are highly impacted.

## Air Quality and Health Index, Chicago 2020

The Air Quality + Health Index combines community-level data on air pollution, health, and social factors to identify the areas in our city that are most vulnerable to the effects of air pollution. Census block groups in green are less vulnerable, while block groups in red are more vulnerable.

### Air Quality + Health Index Deciles

 Chicago Department of Public Health, January, 2020

# South & SE Sides- Health Impacts

## **Health and Covid-19**

- Chicago's south and southeast sides have high positivity rates and/or mortality rates for Covid-19.

# Commentary: COVID-19 Racial Disparities

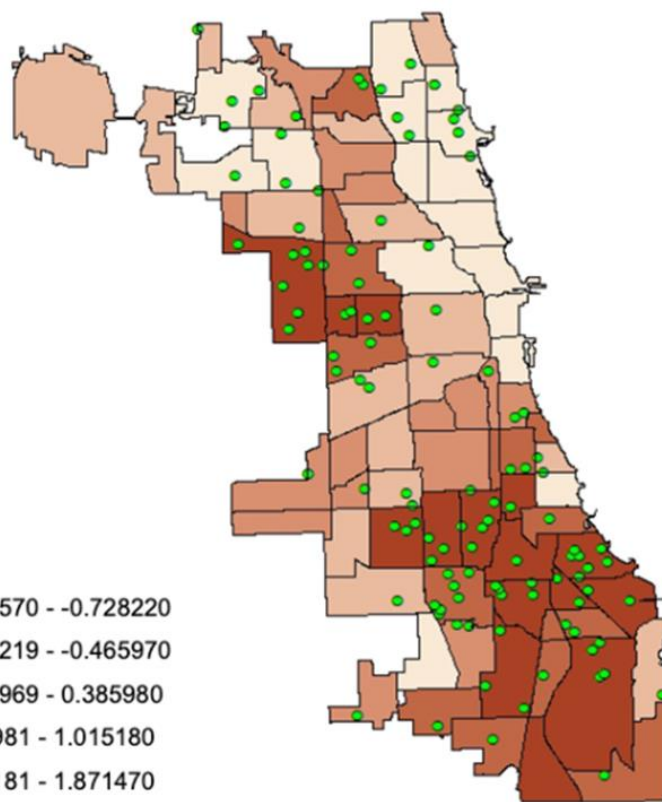

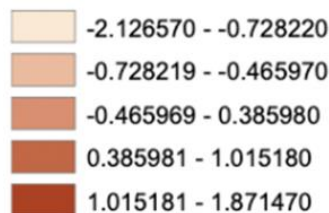

Alexis Grant and Jeni Hebert-Beirne, PhD, SPH Collaboratory for Health Justice | Posted on April 23, 2020

## Risk scores by zip code

As of April 6, 2020

Locations of COVID-19 fatalities  
represented by green dots

While we may all be in this pandemic together, public health professionals knew, communities of color would bare a disproportionate burden of the effects of COVID-19. To track the effects of systemic racism, public health experts examine data on infection and hospitalizations by race/ethnicity. On Monday, April 6, we finally saw these figures for Chicago, and they were not surprising.

Source: <https://publichealth.uic.edu/news-stories/commentary-covid-19-racial-disparities/>

## Top 10 ZIP code mortalities by race and their averages for household populations in Chicagoland

To identify patterns and summarize outcome characteristics, the 10 ZIP codes with the highest race-specific mortality were selected for comparison. These cases include ZIP codes with race-specific mortality above the 94th percentile. Household population mortality per race for the top 10 ZIP codes are presented in the table below.

Based on this analysis, the highest death toll for all races occurs in a predominantly Black/ Latinx community encompassing the South Lawndale and Little Village communities (60623). Comparison of the ZIP code rankings between the overall population and the race-specific columns demonstrates a total discordance for all races. To underline this discordance, two of the top ZIP codes in the overall population are not even listed in any of the race-specific rankings (60714 and 60626); the highest overall population mortality ZIP code (60649; 95 percent Black) with 140 fatalities is only listed for the Black HP with 52 fatalities.

The above findings confirm the importance of long term care facility-related mortality for conducting race-specific studies. In addition, they signify the ZIP code-level distinctiveness of the two populations.

As of 08/27/2020

White		Black		Latinx		Overall	
ZIP	Fatalities	ZIP	Fatalities	ZIP	Fatalities	ZIP	Fatalities
60632	19	60628	67	60623	81	60649	140
